PROJECT : DIABETES PREDICTION SYSTEM SUBMITTED BY : NANDHINI S

Mail ID: nandhiniselvam0405@gmai.com Phase-03

Loading and Pre-Processing the Dataset

ABOUT THIS PHASE:

In this phase we need to do loading and pre-processing the datasets. Here I explain about what are the process to do this phase.

Step 1:

Import the dependencies

In this step we import the library files which are required to run this program code, like modules (numpy, pandas, sklearn, matpltlib, seaborn)

Step 2:

Impoting the dataset

In this step I import PIMA diabetes dataset form the sklearn module it is used to fetch the data and the data is used as the input of this project.

Step 3:

Statical measure of data

In this step I want know some statics about my dataset like mean, count, avg etc,.. and this is the important step in data preprocessing

Step4:

Data standardization:

In this step I standardized my dataset with the help of scaler function

Import the dependencies

import numpy as np
import pandas as pd
from sklearn.preprocessing import StandardScaler
from sklearn.model_selection import train_test_split
from sklearn import svm
from sklearn.metrics import accuracy_score

Data collection and analysis

PIMA Diabetes Dataset

loading the dataset to the pandas dataframe
diabetes_dataset = pd.read_csv('/content/diabetes.csv')

pd.read_csv?

printing the first 5 rows of the dataset
diabetes_dataset.head()

\rightarrow		Pregnancies	Glucose	BloodPressure	SkinThickness	Insulin	BMI	DiabetesPedigreeFunction	Age	Outcome
	0	6	148	72	35	0	33.6	0.627	50	1
	1	1	85	66	29	0	26.6	0.351	31	0
	2	8	183	64	0	0	23.3	0.672	32	1
	3	1	89	66	23	94	28.1	0.167	21	0
	4	0	137	40	35	168	43.1	2.288	33	1

number of rows and column in this dataset
diabetes_dataset.shape

(768, 9)

getting the statistical measures of the data
diabetes_dataset.describe()
